## WHITACRE GREER

euality since 1900

PATTERN \#6 - 6x $3,6 x 6 \& 6 x 9$
Modules of $3.5 \mathrm{ft}^{2}$, each requiring the following pieces:

$$
\begin{aligned}
& 4-6 \times 3 \times 2^{1 / 4} \text { or } 23 / 4 \\
& 6-6 \times 6 \times 21 / 4 \text { or } 23 / 4 \\
& 4-6 \times 9 \times 2^{1 / 4} \text { or } 23 / 4
\end{aligned}
$$

Example: A $10^{\prime}$ x $30^{\prime}$ patio is $300 \mathrm{ft}^{2}$. Divide the number of square feet desired by the square feet per module and multiply the quotient by the number of pieces required for each size.
$300 / 3.5=86 \quad 86 \times 4=344$ pieces of $6 \times 3$
$86 \times 6=516$ pieces of $6 \times 6$
$86 \times 4=344$ pieces of $6 \times 9$
