Whitacre Greer Permeable Pavers are designed to assist with storm water management goals. Permeable pavers may be used by municipal engineers to assist in compliance with Storm water Phase II requirements for Municipal Separate Storm Sewer Systems (MS4) by allowing water to go into the ground between the pavers rather than running off into a drain, ditch or settling pond. Permeable Boardwalk Pavers are 3-inches thick and are ADA compliant.

Whitacre Greer 8 x 8 x 2-1/4 and 4 x 8 x 2-3/4 Permeable Brick Pavers feature the clean crisp lines of our classic dry-pressed 8 x 8. The pavers’ dimensions allow them to be installed interchangeably. This ADA-compliant product is available in the full palette of colors, including custom blends of standard colors. Most of Whitacre Greer standard colors have SKR values of 29 or greater. Whitacre Greer - Winner Brick Industry Association Environmental Stewardship Award.
